Davangere, Karnataka | +91 6366720506 | divyapatelgm220604@gmail.com |  LinkedIn |  GitHub

Summary

AI & Machine Learning undergraduate who ships working software rather than prototypes. Own the data pipeline for a fine-tuned LLM + RAG code review system and am independently extending into its retrieval and training layers with LangChain, ChromaDB, and MLflow.

Education

Bachelor of Engineering, Artificial Intelligence and Machine Learning
GM Institute of Technology, Davangere (VTU)

Sep 2023 – June 2027
CGPA: 8.26

Technical Skills

- **Languages:** Python, JavaScript, PHP, SQL
- **Generative AI:** LLM APIs, RAG, Prompt Engineering, Instruction Tuning, NLP, LangChain, ChromaDB
- **AI/ML:** PyTorch, HuggingFace Transformers, scikit-learn, Pandas, NumPy, MLflow
- **Backend, Web & Tools:** Node.js, Express.js, React.js, REST APIs, Flutter, MySQL, MongoDB, Firebase, Git, GitHub API, Vercel, Render

Experience

Software Developer Intern, GEM Ventures

Feb 2026 – Present

- Building a Ph.D. scholar lifecycle portal for the university in PHP and MySQL on a custom MVC structure, with five role-based consoles for scholars, guides, the RPRC committee, admissions, and the Vice-Chancellor.
- Wrote a centralized server-side workflow validator gating every milestone on prior approvals, so coursework, comprehensive viva, colloquium, RPRC meetings, synopsis, and thesis cannot be submitted out of sequence.
- Extended GMU Connect, a Flutter app used by 5,000+ students, building both frontend and backend for OPAC catalogue search and appointment booking on top of a codebase I had not written.
- Built and shipped the Hostel Management Android app (Flutter, PHP, MySQL) to the Play Store, adopted by 1,000+ residents; still maintaining it as part of the internship.
- Built an internal employee task and project tracker end to end, with analytics dashboards for project status, task load, and throughput.

Projects

Smart GitHub PR Analyzer

Jan 2026 – Present

Major Project, team of 4 | Role: Data Pipeline Owner

In Progress

- Built a GitHub REST API scraper collecting real human review comments from nine high-activity Python and JavaScript repositories, filtered to pull requests with three or more substantive review comments, then cleaned and deduplicated the corpus with Pandas into an instruction-tuning schema preserving severity labels and line numbers.
- Delivered a versioned, split dataset targeting 160,000–180,000 examples, now feeding the team's QLoRA fine-tuning of DeepSeek-Coder 6.7B.
- Independently extending the system with a ChromaDB and LangChain retrieval layer myself and tracking training runs in MLflow to learn the full pipeline rather than one slice of it.

Technical Skills Used: Python, PyGitHub, GitHub REST API, Pandas, HuggingFace Datasets, LangChain, ChromaDB, MLflow, QLoRA (learning)

Smart Code Translator & Analyzer

May 2026

Self-initiated full-stack project

Live Demo | [GitHub](#)

- Picked the problem myself with no brief and shipped a decoupled client-server application that translates, explains, optimizes, and debugs code across multiple programming languages.
- Built the frontend in React and Vite with the Monaco editor and Context API state, backed by an Express.js API with Mongoose models, four purpose-specific Gemini prompt routes, and JWT-based authentication with Google OAuth.
- Deployed frontend to Vercel and backend to Render with CI/CD auto-deploying on each push to main, keeping production secrets in environment variables rather than committed config.

Technical Skills Used: React, Vite, Monaco Editor, Node.js, Express.js, MongoDB, Mongoose, JWT, Google OAuth, Gemini API, Vercel, Render

Hostel Management Mobile Application

Feb 2026 – Present

Full-stack Android app, live since April 2026

Google Play Store

- Replaced paper gate registers with one app covering check-in/check-out, attendance, room vacating, mess polls, and fortnightly feedback, built in Flutter over a PHP and MySQL backend with Firebase notifications, QR-based entry/exit tracking, and role-based access control for student, warden, and admin.
- Live on the Play Store with 1,000+ residents at roughly 99% uptime, cutting gate pass and grievance processing time by around 60%.

Technical Skills Used: Flutter, Dart, PHP, MySQL, Firebase, QR Integration, RBAC, Google Play Console

Achievements & Certifications

- Runner-up, Poster Presentation: National Level Tech Fest 2025 and State Level Tech Fest 2024
- Certification: Databases and Programming Foundations with Python, NxtWave
